It's Simple . . . We Make Coatings That Work!

WATERPROOFING

ABOVE GRADE WATERPROOFING

The METAL LATHE WATERPROOFING SYSTEM is a multi-layer, protective coating which combines an elastomeric waterproofing membrane (Mulasticoat®) with a reinforced latex modified cementitious top coating (Krete Kote System). This system is designed to withstand heavy foot traffic on walkways, decks, ramps, balconies, roofs, etc. The system was designed to be applied to wood substrates in need of a waterproofing and/or fire resistant protective coating.

CONCRETE SUBSTRATE

WOOD SUBSTRATE

WATERPROOFING UNDERLAYMENT FOR TILE

The UNDERLAYMENT WATERPROOFING SYSTEM is a multi-layer protective, waterproofing system. The main component of this system is our MULASTICOAT® waterproofing, which is a roll-on, cold applied, elastomeric waterproofing membrane. Ideally suited for applications under tile.

*See back cover for information on schematic drawings.

WATERPROOFING

PREMIUM BELOW GRADE WATERPROOFING

The SLATEX BELOW GRADE WATERPROOFING SYSTEM is the premier below grade waterproofing system. This system incorporates MULASTICOAT®, a cold applied, waterproofing membrane. It is used in conjunction with SCRATCH KOTE 2000®, a polymer modified cement coating which acts as the protective shell.

LASTO DRAINAGE SYSTEM

LASTO DRAINAGE SYSTEM is a combination of drainage mats and drainage systems. Designed to move water away from below grade walls. Replaces drain board and pipe and gravel systems.

ONE COAT BELOW GRADE WATERPROOFING

BG2000 is a single component, cold applied, waterproofing membrane that can be rolled or sprayed. Thickness can be adjusted as needed from 15 mil to 120 mil depending upon the project's requirements. Water based, so clean up is a breeze. Forms a tough, rubber like membrane that stops water.

KRETE KOTE SYSTEM

DECORATIVE CONCRETE

KRETE KOTE is the system of choice for restoration of old concrete or to add beauty to freshly placed concrete. A super bonding, flexible, cementitious coating which forms a cost-effective, durable, cool, anti-skid, weather and chemical resistant surface over properly prepared substrates. It can be applied to pool decks, driveways, walkways, steps, concrete decks, buildings, bridges, etc. The most popular design is the French Lace (Knock Down - Cool Deck) pattern. Other design options include the Multi-Stain finishes and patterns such as slate, stone, tile, brick, marble, etc.

STAMPABLE OVERLAY

OVERLAY STAMP MIX is a latex based, cementitious coating that is applied to existing concrete slabs. Imprinting of the pattern is achieved through the use of texturing mats which creates the stamped concrete image.

MICRO TOPPING

MICRO TOPPING, is an interior cementitious coating comprised of cement based materials in conjunction with a series of clear epoxy resins and sealers. Ideal for high foot traffic areas. The abuse resistance of these products makes this a perfect selection for most interior applications.

COLORED AND CLEAR SEALERS

ACRATHANE COLORSEAL is a water based, pre-colored, acrylic sealer designed for application over our Krete Kote System or can be used to seal old "cool deck" type surfaces.

CLEAR SEAL is also available in a water based formula which is designed for application over pavers and other masonry units. Ideally suited for application over Multi-Stain.

SEAL BRITE – CA is a solvent type, VOC compliant sealer used as a color enhancer over some overlay products such as our Overlay Stamp Mix.

MICRO TOPPING SEALER is a system of two components; an epoxy filler and a clear aliphatic top coat finish for interior applications. The epoxy fills in the surface for a smoother feel and the clear locks everything into place. Furnished in a kit with Part "A" and "B" mixed together on the job. Especially suited for application over our Micro Topping System.

CONCRETE STAIN

MULTI-STAIN is a penetrating, translucent, stain, that can be used on most concrete surfaces. The use of a Clear Sealer is recommended to lock in the color and seal the application.

MASONRY PATTERNS

Creating patterns on horizontal or vertical surfaces is made easy with disposable templates. Flat template pieces are backed with an adhesive that temporarily sticks to the surface which reduces the amount of product seeping under the template. Flat sheets have no memory and will not curl. Sized for a one person application.

These are just a few of our patterns, many more are available.

LIQUID COLORANTS

LIQUID COLORANTS were designed to add pigment to any of our bagged material to achieve an integral color. It can also be used to add color to other cementitious bagged material such as grouts and mortars. Sold in a 4-oz. jar, use a maximum of three jars per 65-lb. bag.

POOL AND SPA RESTORATION

SCRATCH KOTE 2000® remains the gold standard for pool renovations as it has for nearly 30 years. It is a super-bonding, latex modified, cementitious coating which forms a hard, rough, textured base coat. Once applied by roller or spray, SCRATCH KOTE 2000® provides the ideal surface for new pool finishes. It creates both a mechanical and chemical bond between the old finish and the new finish which can range from plaster, quartz, pebble, or tile. It is similar to new gunite or shotcrete in both function and appearance. SCRATCH KOTE 2000® eliminates chip outs, brown coats, and minimizes down time.

INDUSTRIAL CONCRETE RESTORATION

POND KOTE is designed for Fish Hatchery Restoration. Rough walls promote deadly bacteria and damage fish. POND KOTE protects the concrete and smoothes out the wall making it safer for the fish and makes cleaning the surface much easier. Also used for industrial concrete repair in applications such as: processing plants, chemical and other manufacturing facilities which require a quick repair method to limit down time.

WATER FEATURE WATERPROOFING

This waterproofing system is ideal for ponds and water features. MULASTICOAT® forms an elastic waterproof membrane while POND KOTE forms a hard durable protective layer.

AQUA PROOF

AQUA PROOF is a unique, easy to apply waterproofing material designed for water features, ornamental ponds and more. It is furnished in a ready-to-use gallon can in a variety of colors. Application is by standard paint roller or brush. Ideal for areas less than 100 Sq. Ft. Water based for easy clean up.

FAST SET REPAIR MORTAR

SPEED MIX repair mortar is a rapid set, high early strength, hydraulic cement that allows for quick repairs. Ideal for use under the KRETE KOTE System or as a stand-alone material.

CRACK REPAIR SYSTEM

SPEED BOND is a quick set, fast curing, super bonding, flexible concrete crack repair material. It is self-leveling and used to repair cracks and small holes prior to the application of the KRETE KOTE System or other MULTICOAT systems. It is also ideal as an anchoring material.

*See back cover for information on schematic drawings.

MULTI-TEX® STUCCO SYSTEM

The MULTI-TEX® STUCCO SYSTEM consists of a high build flexible acrylic emulsion applied to smooth, primed, fiber-cement panel. It forms a cost-effective, durable weather-resistant exterior stucco finished wall, installed on wood or steel frame, residential or commercial structures. MULTI-TEX® is a one-coat stucco system, designed for its cost effectiveness as well as its ease of application.

HARD COAT STUCCO SYSTEM

The HARD COAT STUCCO SYSTEM is a traditional “lathe and plaster” which is comprised of our acrylic modified STUCCO BASE troweled over metal lathe. Then our flexible acrylic based synthetic STUCCO FINISH is applied and textured to the desired finish.

ICF STUCCO SYSTEM

Multicoat has developed coatings for Insulated Concrete Form Systems that provide an impact resistant exterior stucco finish for commercial and residential uses.

*See back cover for information on schematic drawings.

"Multicoat understands the importance of manufacturing quality waterproofing and concrete coatings. As a Commercial Waterproofing Contractor with over 20 years as a Certified Multicoat Applicator, we strongly recommend architects to specify Multicoat systems."

Michael Gutman, Jobsite Supervisor, Flexground – Phoenix, AZ

"As an exporter of Multicoat materials, I have to insure that my order is complete, accurate, and on time for shipping to meet our tight scheduling demands. Most importantly we rely on Multicoat to furnish very good quality materials that can meet our high expectations and they have not let us down."

Yujiro Honda, President, Honda Housing – Japan

"For over 20 years, my family's business has promoted the Multicoat product line. We put faith in them and their products, that they would live up to our reputation, and we have been elated with their performance. Their track record is second to none."

John Haase, President, Phoenix Products – Terryville, CT

ABOUT THE COMPANY

For almost 30 years, Multicoat has maintained its reputation for providing the highest caliber of products to the construction industry worldwide. Since our inception we have partnered with well known, and globally respected, raw material manufacturers and suppliers. They supply us with the quality ingredients we demand in order to offer our clients the best possible product. We offer products and systems for pool restoration, deck coatings, sealers and stains, waterproofing, concrete repair, stucco systems and more.

FROM OUR PRESIDENT

"On behalf of the entire Multicoat team, I want to personally thank you for your interest and continued support of Multicoat Products. We pride ourselves on manufacturing a great quality product at a fair price and in providing outstanding customer service. We value the opportunity that we've had to work with you and look forward to serving you another 30 years." **Dave Maietta**

**TOP QUALITY • TOUGH • DURABLE • RELIABLE • GREAT VALUE
SERVICE ORIENTED • REPUTABLE • DEPENDABLE**
